Company Profile

JKM Chemtrade is a renowned name in the chemical industry, specializing in the manufacturing, trading, and export of a wide range of chemicals. Our diverse chemical products portfolio includes Agrochemicals, Aqua chemicals, Cattle and Poultry feed, Cosmetic and Personal Care, Food& Beverages, Homecare and Solvents and many more.

We are committed to providing high-quality chemicals to our customers, ensuring timely delivery and excellent service. Our experienced team of professionals ensures that all our products meet strict quality standards and comply with relevant regulations. We aim to build long-term relationships with our customers, partners, and suppliers, based on trust, transparency, and mutual benefit.

With a strong focus on innovation and sustainability, we strive to create value for our stakeholders while contributing to the development of a better world. At JKM Chemtrade, we believe that by working together, we can create a brighter future for all. Chemical Product

Vision and Mission

Vision

Our vision is to be a global leader in the chemical industry, recognized for our innovation, sustainability, and excellence. We strive to create a better world by providing innovative and sustainable solutions to the challenges facing our planet. We believe in building a future where chemicals play a vital role in improving people's lives while minimizing their impact on the environment

Mission

Our mission is to be a leading player in the chemical industry, providing high-quality products and services to our customers worldwide. We aim to achieve sustainable growth and create value for all our stakeholders, while contributing to the development of a better world.

Our core values

ETHICS

We conduct our business with honesty, integrity, and transparency, and we are committed to ethical behavior in all our dealings

CUSTOMER SERVICE

We strive to provide exceptional customer service by delivering timely and reliable solutions that meet our customers' needs

RESPECT

We respect the rights and dignity of all individuals, and we foster an inclusive and supportive work environment where everyone can thrive

CATEGORY

Agro chemical

Aqua chemical

Cosmetics & personal care

Cattle & poultry Feed

Home care

Solvents

Agro chemical

1. Alphox 200

CAS NO- 9016-45-9

Alphox is useful as a non-ionic component along with anionic surfactant for formulation of emulsifiers for pesticidal sprays.

2. Amino acid 50% & 80% (Soya Base)

Amino Acid Powder is a bio-organic nutritional product derived from vegetable source (Soya) required for plant growth promotion and for higher yields. It promotes hormonal activity and induces their synthesis resulting into flowering and fruit setting.

3. Ammonium Sulphate

CAS NO- 7783-20-2

Ammonium Sulphate is used as a fertilizer for alkaline soils. It is necessary for plant growth & development.

4. Borax Decahydrate

CAS NO- 1303-96-4

Borax Decahydrate is used as a source of micronutrient Boron and can be blended with commonly used bulk / liquid fertilizers & micronutrient mixtures for Soil application or Foliar Spray.

5. Borax Pentahydrate

CAS NO- 12179-04-3

Borax Pentahydrate is necessary for plant development, growth, crop production, and seed development by assisting with water and nutrient transport in plants.

8.EDTA Calcium 10%

EDTA Calcium 10% Improves the strength of the cell walls, resulting in improved shelf life and resistance to disease.

9.Citric Acid Anhydrous

CAS NO- 77-92-9

Citric Acid is an organic compound which is used in agriculture fertilizer formulation. Citric acid is mainly used as a pesticide for frogs.

10.EDTA Copper 12%

Copper- EDTA is mainly used for agriculture and horticulture as micronutrient and macronutrient to prevent the copper deficiency.

11.Copper sulphate 24%

CAS NO- 7755-98-7

Copper sulfate is used as a fungicide, algacide, and herbicide in agriculture. It is also used as an antimicrobial and molluscicide.

12.EDTA Disodium

CAS NO- 139-33-3

Disodium EDTA is a chelating agent, used to sequester and decrease the reactivity of metal ions that may be present in a product.

13. Ferrous – EDDHA – 6%

Ferrous-EDDHA is used in prevention and cure of micro-deficiency, the most efficient among the treatments on the soil.

14.EDTA Ferrous

EDTA Ferrous is used as fertilizer used to overcome Iron deficiency symptoms in plants which require iron for their normal growth and high-quality yield. It can be used as soil application or foliar spray.

15.Ferrous Sulphate

CAS NO- 13463-43-9

Ferrous Sulfate is used as a soil amendment for lowering the pH of a high alkaline soil. In Horticulture it is used for treating Iron Chlorosis.

16.Fulvic Acid 80%

CAS NO- 479-66-3

FULVIC Acid used as fertilizer. It promotes Flowering, Fruiting, Immunity, Overall Growth, Root Development in Hydroponics and Green House.

17.Glycerin

CAS NO- 56-81-5

Glycerine is the most widely used substance to help preserve plant material although many chemicals possess by hygroscopic properties.

18. Hydrogen Peroxide 50 %

CAS NO- 7722-84-1

Hydrogen Peroxide prevents and controls bacteria and fungi that cause serious plant diseases. Hydrogen peroxide breaks down rapidly in the environment to oxygen and water.

19.EDTA Magnesium 6%

Magnesium EDTA is used to remedy soil for artificial substrate deficiencies. It is used as foliar spray, or a medium drench.

20.Magnesium Sulphate

CAS NO- 7487-88-9

Magnesium sulphate is used as fertilizer. It is used to improve nitrogen and phosphorous uptake by Plants, Crops.

21.EDTA Manganese -12%

Manganese-EDTA is used as fertilizer. It is mostly used as a micronutrient in horticulture. Manganese fertilizers aid in the prevention and correction of manganese deficiency due to nutritional imbalances.

22.Manganese Sulphate

CAS NO- 10034-96-5

Manganese Sulfate is used as an ingredient in blended fertilizers. It is used to treat manganese deficiency in plants.

23. Phosphoric acid 85%

CAS NO- 7664-38-2

Phosphoric Acid is used in the production of fertilizers. It is used to produce phosphate fertilizers such as ammonium phosphate, calcium phosphate, and potassium phosphate.

24. Potassium Carbonate

CAS NO- 584-08-7

Potassium Carbonate is used as a fertilizer. This results in higher crop yields and increases the quality of the yields.

25. Potassium Chloride

CAS NO- 7447-40-7

Potassium Chloride is the most widely used potassium fertilizer in the world. Potash efficiently delivers potassium nutrient to the growing crop.

26. Seaweed Extract Powder

Seaweed Extract is suitable for all crops and promotes balanced growth of crops, boosts the capacity of immunity and resistance, improves crop quality and increases yield.

27. Sodium Acetate Anhydrous

CAS NO- 127-09-3

Sodium acetate is used in nematicides as an attractant. Nematicides are a type of pesticide used to kill the worms on plants.

28. Sodium Benzoate

CAS NO- 532-32-1

Sodium benzoate is widely used as a preservative and has more recently been used as a growth regulator.

29. Sodium Bicarbonate

CAS NO- 144-55-8

Sodium bicarbonate is a naturally alkaline compound that helps maintain proper pH to maximize crop production.

30.Sodium Carbonate

CAS NO- 497-19-8

Sodium Carbonate is used in fertilizer formulation to improve granule formulation by binding extrusion granules.

31.Zinc Sulphate 21% & 33%

Zinc sulphate is used to supply the needed amount of zinc when dry fertilizer materials are used. It blends well with other dry fertilizer materials.

32.EDTA Zinc -12%

Zinc EDTA is one of the essential micronutrients which is crucial for plant growth. Zinc is required by several enzyme systems, auxins and protein synthesis, in seed production & rate of maturity.

A background image for the Aqua Chemicals section. It features a close-up of a glass dropper with a single drop of liquid falling from its tip. The surface of the liquid and the surrounding area are covered with numerous small, glistening water droplets, creating a textured, wet appearance. The lighting is soft, highlighting the spherical shapes of the droplets.

AQUA CHEMICALS

1. Calcium Chloride

CAS NO- 7440-70-2

Calcium Chloride can be used in water to lower freezing temperature, as a moisture absorber, and various other uses.

2. Copper sulphate 24%

CAS NO- 7755-98-7

Copper Sulphate is used in freshwater and marine aquaculture systems. It acts as an algicide and fungicide and is used globally in agriculture and aquaculture.

3. Hydrogen Peroxide 50%

CAS NO- 7722-84-1

Hydrogen peroxide has also been used in aquaculture as an immersion (bath) treatment against many different disease-causing organisms, including external parasites, bacteria, and fungi, on different species and life-stages of fish.

4. Potassium Chloride

CAS NO- 7447-40-7

Potassium Chloride Promotes Weight gain in Aquatic Animals. It also reduces the risk of animal stress and cramping.

5. Potassium Permanganate

CAS NO- 7722-64-7

Potassium Permanganate can be used as an oxidizing agent for disinfection of Hatcheries and Aquaculture facilities. It is also used as a water treatment additive to react with organic matter in a pond such as algae, bacteria, and some parasites.

6. Stable Bleaching Powder

CAS NO- 7778-54-3

Stable Bleaching Powder is used for the disinfection of water in the treatment process. The chlorine released by the Bleaching powder kills Pathogens (Disease-causing Bacteria).

7. Zinc Sulphate 21% & 33%

Zinc Sulphate is used as a Zinc supplement. Zinc potentiates the metabolism function, synthesis of essential enzymes, and the formation of hormones associated with growth, reproduction, immunity, and antioxidative roles in aquatic animals.

Cosmetics & Personal Care

1.Acetic Acid glacial

CAS NO- 64-19-7

Acetic Acid is used to control the pH of cosmetics and personal care products. Vinegar is used in the formulation of hair conditioners, shampoos, hair rinses, wave sets, and can be found in skin care products.

2.Acid Thickener

Acid Thickener enhance the consistency, volume and viscosity of cosmetic products, thereby providing more stability and better performance.

3.Alpha Olefin Sulphonates (AOS) liquid/Powder

AOS is commonly used as a surfactant in personal care products, such as sulfate-free shampoo, liquid and bar soaps, hand sanitizers, bath lotions, bubble baths, and facial cleansers.

4.Benzalkonium Chloride 50% & 80%

CAS NO- 8001-54-5

Benzalkonium Chloride is used in cosmetics primarily as a preservative. It is also a good surfactant that allows for the easier mixing of different ingredients.

5.Borax decahydrate

CAS NO- 1303-96-4

Borax is used as an emulsifier, buffering agent or preservative for moisturizing products, creams, shampoos, gels, lotions, bath bombs, scrubs, and bath salts.

6.Borax Pentahydrate

CAS NO- 12179-04-3

Borax pentahydrate is used in the production of cosmetics. It helps to soften the skin and make it more radiant.

7. Caustic Soda Flakes

CAS NO- 1310-73-2

Sodium hydroxide is commonly used to maintain pH levels in skin care products. Sodium hydroxide is a common ingredient in skin care products like soap, face wash, body cream and lotion.

8. Citric Acid Anhydrous

CAS NO- 77-92-9

Citric Acid is an AHA (Alpha Hydroxy Acid) and can be used in exfoliating formulations to help remove dead skin cells and dirt to reveal fresh, softer, smoother skin.

9. Coco Di ethanol Amide (CDEA)

CAS NO- 68603-42-9

CDEA is a foam booster and viscosity Modifier. It works as Cleansing Products as a stabilizer & Thickening agent.

10. Coco Amido Propyl Betaine (CAPB)

CAS NO- 61789-40-0

Coco amido Propyl Betaine is an ingredient in shampoo, body wash. It acts as foam booster, thickener and stabilizer.

11. Disodium EDTA

CAS NO- 139-33-3

Disodium EDTA binds to metal ions which inactivate them. The binding of metal ions helps prevent the deterioration of cosmetics and personal care products thus enhancing their stability. It also helps to maintain clarity, protect fragrance compounds, and prevent rancidity.

12. Glycerin

CAS NO- 56-81-5

Glycerin is used in cosmetics and personal care products such as soaps, toothpaste, shaving cream and lubrication. It is also a well-known humectant that prevents the loss of moisture from products.

13. Liquid Paraffine (Light/Heavy)

CAS NO- 8042-47-5

Liquid paraffin is a hydrating and cleansing agent. Hence, it is used in several cosmetics both for skin and hair products. It is also used as one of the ingredients of after wax wipes.

14. Magnesium Sulphate

CAS NO- 7786-30-3

Magnesium Sulfate is a side ingredient that is used in order to control the viscosity and bulk up the product in Cosmetics.

15. Methyl paraben

CAS NO- 99-76-3

Methylparaben is used as a preservative in Cosmetic & Personal care.

16. Phenoxyethanol

CAS NO- 122-99-6

Phenoxyethanol is used as a preservative in cosmetic products to limit bacterial growth.

17. Potassium Sorbate

CAS NO- 24634-61-5

Potassium Sorbate is the potassium salt of sorbic acid. Potassium sorbate is a preservative in cosmetics, and personal care products.

18. Propyl Paraben

CAS NO- 94-13-3

Propylparaben is a preservative in water-based cosmetics, such as creams, lotions, shampoos and bath products. It has a role as an antifungal agent and an antimicrobial agent.

19. Propylene Glycol

CAS NO- 57-55-6

Propylene Glycol used as a humectant, skin conditioner, carrier in fragrance oils, solvents and viscosity reducers to retain moisture in the skin.

20. Silicone Oil & Emulsifier

CAS NO- 68083-14-7

Silicone oil performs the function of skin conditioning. It holds the drop of liquid, present in the mixture while making cosmetics. It is used as an emulsifier.

21. Sodium Benzoate

CAS NO- 532-32-1

Sodium benzoate is commonly used as a preservative in cosmetics and personal care items, such as hair products, baby wipes, toothpaste, and mouthwash.

22. Sodium Bicarbonate

CAS NO- 144-55-8

Sodium Bicarbonate is used to control the acid-base balance of cosmetic products. It can also absorb moisture and helps to control odor.

23. Sodium Citrate

CAS NO- 6132-04-3

Sodium citrate acts as a buffering agent in cosmetics products and is used to control their pH level. It can also be used as a preservative.

24. Sodium lauryl Ether Sulphate 28% & 70% (SLES)

CAS NO- 9004-82-4

SLES is used to produce dandruff treatment products, hair gels, hair setting sprays, and conditioners. SLES is used to produce mouthwash, toothpaste, and tooth whitening products.

25. Sodium lauryl Sulphate (SLS) Liquid

Sodium Lauryl Sulfate (SLS) is a widely used surfactant in cosmetics, and personal care products. The sodium lauryl sulfate formula is a highly effective anionic surfactant used to remove oily stains and residues.

26. Sodium Methyl Paraben

CAS NO- 5026-62-0

Sodium Methyl Paraben is used as a Preservative in Cosmetic & Personal care Products.

27. Sodium Propyl Paraben

Sodium Propylparaben has been used as an antimicrobial preservative in cosmetic & Personal Care products.

28. Sodium Sulphate

CAS NO- 7757-82-6

Sodium Sulfate is used in the formulation of cleansers, bath soaps and detergents, and skin care products.

29. Stearic Acid

CAS NO- 57-11-4

Stearic acid is used to thicken the products and bind the ingredients together. It has moisturizing and anti-inflammatory properties.

30. Titanium Dioxide

CAS NO- 13463-67-7

Titanium dioxide (TiO₂) is used in a variety of personal care products, including sunscreens, pressed powders, and loose powders, as a UV filter or whitening agent.

31. Xanthan Gum

CAS NO- 11138-66-2

Xanthan Gum is used as an effective thickening agent, emulsifier and stabilizer that prevents ingredients from separating. In cosmetics, Xanthan gum is used to prepare water gels.

Cattle & Poultry Feed

1. Caustic soda flakes

CAS NO- 1310-73-2

Caustic soda is used in the processing of animal feed to help break down cellulose and other fibrous materials, making them more digestible for livestock.

2. Copper Sulphate 24%

CAS NO- 7755-98-7

Copper Sulphate is used as Therapeutic use means it is used to kill bacteria, fungus, algae and other pests.

3. Dextrose monohydrate

CAS NO- 5996-10-1

Dextrose Monohydrate acts as a sweetener, pigment and flavor enhancer in various pet food and feed specialties. It has a sweet flavor and therefore improves the palatability of finished products.

4. Ferrous Sulphate

CAS NO- 13463-43-9

Ferrous sulphate (Iron) is an essential element for animal nutrition.

5. Liquid Glucose

CAS NO- 8027-56-3

Glucose is the main precursor for lactose synthesis and is therefore required in large amounts by lactating dairy cows to cover the milk demand.

6. Manganese Sulphate

CAS NO- 10034-96-5

Manganese Sulphate plays an important role in growth, bone development, perosis prevention, optimal eggshell quality and performance maintenance of poultry.

9. Sodium Citrate

CAS NO- 6132-04-3

Sodium Citrate has buffering and antimicrobial properties which can maintain normal pH of milk and subsequently prevent the formation of calcium ion crystals leads to cure from mastitis and improvement in milk quality.

10. Xanthan Gum

CAS NO- 11138-66-2

Xanthan gum has been used in animal liquid feed supplements to increase the viscosity of the supplements such that low concentrations of insoluble minerals containing nutritional value do not settle from the liquid.

11. Zinc Sulphate 21% & 33%

Zinc Sulfate level can play a crucial role in your animal's health and assist in the bodily functions including proper vitamin absorption and protein synthesis.

Food & Beverages

1. Acetic Acid Glacial

CAS NO- 64-19-7

Acetic acid is used as a sour agent added in vinegar, pickled vegetables, and sauce, and as a raw material for spice.

2. Acrylic acid

CAS NO- 79-10-7

It is used as a food additive, particularly in vinegar production. Preservation of pickles and other food products.

3. Ascorbic acid (Vitamin C)

CAS NO- 50-81-7

Ascorbic acid acts as a preservative to keep food such as bread, cured meats, jams and jellies, from spoiling.

4. Citric Acid Anhydrous

CAS NO- 77-92-9

Citric Acid Anhydrous is a white crystalline powder. It acts as a preservative and antioxidant. It is also used as an acidulant, flavoring agent and Anti staling agent in soft drinks, candy, jams, and jellies.

5. Dextrose monohydrate

CAS NO- 5996-10-1

Dextrose Monohydrate is used as a sweetener in confectioneries, cakes, beverages, biscuits, cookies, jams, jellies, and honey products.

6. Glycerin

CAS NO- 56-81-5

Glycerin is used as an ingredient in a variety of food and beverage products to help retain moisture, prevent sugar crystallization, and add bulk-smoothness, softness, sweetness and texture.

7. Maize Starch

CAS NO- 9005-25-8

Most commonly known as corn starch, maize starch is used in Bakery industry, as well as thickening sauces, puddings, and gravies.

8. Lactic Acid

CAS NO- 79-33-4

Lactic acid is a good preservative because it can kill and suppress bacteria in food. Lactic acid also helps prevent discoloration and works as a gelling agent and a curing agent.

9. Liquid glucose

CAS NO- 8027-56-3

Liquid Glucose is a sweetener, bulking agent and a humectant.

10. Phosphoric acid 85%

CAS NO- 7664-38-2

Phosphoric Acid is typically used for pH control in the food industry, for example in the manufacture of cheese products, fats, and shortenings.

11. Potassium Chloride

CAS NO- 7447-40-7

Potassium Chloride is used as a flavor enhancer, flavoring agent, nutrient supplement, pH control agent, and stabilizer or thickener.

12. Potassium Sorbate

CAS NO- 24634-61-5

Potassium Sorbate is widely used as a preservative in foods and drinks. It is an odorless and tasteless salt synthetically produced from sorbic acid and potassium hydroxide.

13. Propylene Glycol

CAS NO- 57-55-6

Propylene glycol is used in a variety of food products, including coffee-based drinks, Liquid sweeteners, ice-cream, whipped dairy products and soda.

14. Sodium Benzoate

CAS NO- 532-32-1

Sodium Benzoate is a white, odorless, crystalline powder that is used as a food preservative. Sodium Benzoate is used to preserve food products with an acidic pH.

15. Sodium Bicarbonate

CAS NO- 144-55-8

Sodium bicarbonate can be used in bakery and pastry applications to cook cakes, crackers, waffles, and more. It is also used in drinks for its carbonating or foaming properties.

16. Sodium Citrate

CAS NO- 6132-04-3

Sodium citrate is used as acidity regulator in food and drinks, and also as emulsifiers for oils. They enable cheeses to melt without becoming greasy.

17. Sorbitol

CAS NO- 50-70-4

Sorbitol is largely used as a low-calorie sweetener, a humectant, a texturizer, or a softener. It is used in a wide range of food products, such as chewing gums, candies, desserts, ice creams, and diabetic foods.

18. Xanthan Gum

CAS NO- 11138-66-2

Xanthan Gum is used to stabilize products by preventing ingredients from separating. Some of its attributions include improved consistency, shelf life, flavor and appearance.

Home Care

1. Acid Slurry 90% (LABSA)

Acid slurry is extensively used for the manufacture of detergent powder and washing soap.

2. Alpha Olefin Sulphonates (AOS) Liquid / Powder / Paste

Alpha olefin sulfonate is commonly used as a surfactant in personal care products, such as sulfate-free shampoo, hand sanitizers, bath lotions and facial cleansers, as well as in various household products such as dishwashing liquids and vehicle wash liquids.

3. Alphox 200

CAS NO- 9016-45-9

Alphox 200 as a defoaming agent in cold water cleaners. Alphox 200 is an oil soluble detergent and dispersing agent for petroleum oils.

4. Benzalkonium Chloride 50% & 80%

CAS NO- 8001-54-5

Benzalkonium Chloride is used as disinfectant and as biocide in water treatment chemicals. It also works as an antibacterial for fighting against different bacteria.

5. Borax Decahydrate & Pentahydrate

Borax works as a cleaning agent used to clean the drain, dishwasher, deodorize carpets and remove rust stains.

6. Caustic Soda Flakes

CAS NO- 1310-73-2

Caustic Soda Flake is used to manufacture soaps and a variety of detergents used in homes and commercial applications. Drain cleaners that contain Caustic Soda Flake convert fats and grease that can clog pipes into soap, which dissolve in water.

7. CBS-X (Tinopol)

CAS NO- 27344-41-8

CBS-X (Tinopol) is mainly used in high-grade synthetic laundry detergent, super concentrated liquid detergent, and used in the whitening of soap and toilet soap.

8. Cetrimonium Chloride (CTAC)

CAS NO- 112-02-7

Cetrimonium Chloride is a cationic quaternary ammonium salt that is used as a light hair conditioning agent. Its use in conditioners and cream rinses improves both wet and dry combing and reduces static electricity.

9. Cetyl Alcohol

CAS NO- 36652-82-4

Cetyl Alcohol acts in soaps as lather stabilizer and extends the life of the lather.

10. Citric Acid Monohydrate / Anhydrous

CAS NO- 77-92-9

Citric Acid is used in cleaner. Citric acid lowers the pH levels of bacteria, allowing the cleaner to penetrate the cell walls of mold, mildew, and bacteria.

11. Coco di ethanol amide (CDEA)

CAS NO- 68603-42-9

Coco di ethanol Amide (CDEA) is used as a foaming agent in shampoos, hand soaps, and bath products.

12. Coco Amido Propyl Betaine (CAPB)

CAS NO- 61789-40-0

Coco amido propyl betaine (CAPB) is used as foam booster and used to cleaning of lather.

13. Glycerin

CAS NO- 56-81-5

Glycerin is used to improve the laundry soap's ability to dissolve various soils, clean without leaving residue, and prevent the separation or deterioration of various ingredients.

14. Liquid Paraffin (Light/Heavy)

CAS NO- 8042-47-5

Liquid Paraffin is generally used to make soap bars, followed by glycerin. It has other used as lubricants and refining agents in producing petrochemicals, candles, and cosmetics.

15. Phenoxyethanol

CAS NO- 122-99-6

Phenoxyethanol is Used as a preservative, stabilizer, and a fragrance ingredient found in cosmetics, cleaning, dish soap, laundry and personal care products.

16. Phosphoric acid 85%

CAS NO- 7664-38-2

Phosphoric Acid is used in the formulation of a wide variety of Household product including bath products, cleansing products, hair care products and cleaning care products etc.

17. SLS Needles

SLS is used as a foaming agent. In Many products SLS is used to give a foaming action during the cleaning process.

18. Sodium Benzoate

CAS NO- 532-32-1

Sodium benzoate extends the shelf life of liquid soap and prevents fungi like yeast and mold from colonizing. It is used as a preservative.

19. Sodium bicarbonate

CAS NO- 144-55-8

Sodium Bicarbonate is used as an ingredient in cleaning agents. Sodium bicarbonate creates an alkaline environment that can be used to clean grease and dirt.

20. Sodium Carbonate

CAS NO- 497-19-8

Sodium Carbonate is used as a water softener in laundering. It competes with the magnesium and calcium ions in hard water and prevents them from bonding with the detergent being used.

21. Sodium Hexametaphosphate

CAS NO- 68915-31-1

Sodium hexametaphosphate (SHMP) is a food additive and a softening agent for water and detergents.

22. Sodium lauryl ether sulphate 28% & 70% (SLES)

CAS NO- 9004-82-4

Sodium Lauryl Ether Sulphate (SLES) is used as a foaming agent and surfactant, wetting surfaces, emulsifying or solubilizing oils and suspending soil so that they can be rinsed away.

24. Sodium Sulphate

CAS NO- 7757-82-6

Sodium sulphate is mainly used as a filler in the manufacture of powdered home laundry detergents and in the Kraft process of paper pulping for making highly alkaline sulfides.

25. Sodium tripolyphosphate (STPP)

CAS NO- 7758-29-4

STPP improves the ability of detergents to penetrate fiber and other materials. It also aids in foaming, and its pH buffering ability makes it useful as a water softener. STPP is used in household cleaning products.

26. Stearic Acid

CAS NO- 57-11-4

Stearic acid is useful as an ingredient in making candles, soaps, plastics, oil pastel, cosmetics and for softening rubber.

27. Titanium Dioxide

CAS NO- 13463-67-7

Titanium Dioxide is a natural mineral pigment that is used as a whitener and opacifier in both Melt and Pour Soap and Cold Process Soap.

28. Turkey Red Oil (TRO)

CAS NO- 68187-76-8

Turkey Red Oil (TRO) is used in household cleaning product. It is used in white phenyl manufacturing.

29. Zinc Oxide

CAS NO- 1314-13-2

Zinc oxide is used as a bulking agent or filler, and as a white pigment. It is also used in paints as a corrosion inhibitor and for mildew control.

Solvent

1. Acrylic acid

CAS NO- 79-10-7

Acrylic acid serves as a precursor to produce chemicals, such as acrylates, superabsorbent polymers, and polyacrylic acid.

2. Diethylene Glycol (DEG)

CAS NO- 111-46-6

Diethylene glycol(DEG) is an organic compound. It is a colorless, practically odorless, and hygroscopic liquid. It is a four-carbon dimer of ethylene glycol. DEG is a widely used solvent.

3. Ethyl Acetate

CAS NO- 141-78-6

Ethyl acetate is a widely used solvent, especially for paints, varnishes, lacquers, cleaning mixtures, and perfumes.

4. Formic Acid

CAS NO- 64-18-6

Formic acid was used as a common solvent for Electrospinning of PHB/soy protein. Biodegradable blend nanofibrous mats with increased hydrophilicity obtained.

5. Glycerin

CAS NO- 56-81-5

It's low freezing temperature is beneficial because it can reduce the freezing point of various solution. This is useful in processes like enzymatic analyses.

6. Light Liquid Paraffin

CAS NO- 8042-47-5

Light Liquid Paraffin is used as a lubricant in a variety of industrial applications, such as metalworking and machinery. It helps to reduce friction and wear.

7. Mono Ethylene Glycol (MEG)

CAS NO- 107-21-1

Mono-ethylene Glycol (MEG) is used for applications that require chemical intermediates for resins, solvent couplers, freezing point depression, solvents, humectants.

8. Polyethylene Glycol (PEG)

CAS NO- 25322-68-3

Polyethylene glycol (PEG) is aneco-friendly solvent. Various metal-catalyzed carbon-carbon bond formation reactions can conduct in PEG.

9. Propylene Glycol

CAS NO- 57-55-6

Propylene glycol is used as an organic solvent and diluent in pharmaceuticals and many other industrial applications. Propylene glycol is a synthetic liquid substance that absorbs water.

Product List

Acetic acid (Glacial)
Acid Slurry
Acrylic acid
Alpha Olefin Sulphonates (AOS) liquid/powder/Paste
Alphox 200
Aluminium Sulphate
Amino Acid 50% /80% (Soya Base)
Ammonium Sulphate
Ascorbic acid (Vitamin C)
Benzalkonium Chloride 50% & 80%
Borax Decahydrate / Pentahydrate
Boric Acid
Boron 20%
Calcium Chloride
Caustic soda flakes
CBS-X (Tinopol)
Cetrimonium chloride (CTAC)
Cetyl Alcohol
Citric Acid Monohydrate/ Anhydrous
Coco Amidopropyl betaine (CAPB)
Coco Diethenol amide (CDEA)
Copper sulphate 24%
Dextrose Anhydrous/ Monohydrate
Diethylene Glycol (DEG)
EDTA Calcium 10%
EDTA Copper 12%
EDTA Disodium
EDTA Ferrous
EDTA Magnesium 6%
EDTA Manganese -12%
EDTA Zinc -12%
Ethyl Acetate
Ferrous EDDHA - 6%
Ferrous Sulphate
Formic Acid
Fulvic Acid 80%
Glycerin
Hydrogen Peroxide 50%
Lactic Acid
Liquid Glucose
Liquid Paraffin (Light/Heavy)
Magnesium Sulphate
Maize Starch
Manganese Sulphate
Methyl paraben
Mono Ethylene Glycol (MEG)

Oxalic acid
Phenoxyethanol
Phosphoric acid 85% Tech/ Food
Polyethylene Glycol (PEG)
Potassium Carbonate
Potassium Chloride
Potassium Humate shiny flakes
Potassium Hydroxide (KOH)
Potassium Permanganate
Potassium Sorbate
Propyl Paraben
Propylene Glycol
Seaweed Extract Powder
Silicone Oil & Emulsifier
SLS Needles
Sodium Acetate Trihydrate/Anhydrous
Sodium Benzoate
Sodium Bicarbonate
Sodium Bisulphite
Sodium Carbonate
Sodium Citrate
Sodium Hexametaphosphate (SHMP)
Sodium lauryl ether sulphate 28% & 70% (SLES)
Sodium lauryl sulphate (SLS) LIQUID
Sodium Methyl Paraben
Sodium Nitrate
Sodium Nitrite
Sodium Perborate
Sodium Propyl Paraben
Sodium Sulphate
Sodium Sulphite Anhydrous
Sodium Thiosulphate
Sodium Tripolyphosphate (STPP)
Sorbitol
Stable Bleaching Powder
Stearic Acid
Titanium dioxide
Turkey red oil (TRO)
Xanthan gum
Zinc Oxide
Zinc Sulphate 21% & 33%
